

**Fi2000**

## FI2000 POWRPRO WITH CVT TECHNOLOGY

- CVT – Continuously Variable Tuning is the key to the remarkable performance the Fi2000 PowrPro delivers
- PowrPro uses electronic control technology that calculates the bike's rate of acceleration by reading crankshaft rotation at the flywheel and changes in load just as a dynamometer measures acceleration at the rear wheel
- PowrPro measures and adjusts fuel flow during acceleration to the injectors in microseconds for super-fast fuel tuning – continuously and automatically; net result: precise EFI tuning now happens in the real world in real time, nonstop, up to 80 times per second
- New patented technology unlike any other system on the market
- PowrPro tunes to precise air-fuel mixture to create maximum power 80 times per second (does not tune to a predetermined arbitrary AFR)
- Creates that adjustment to maximum power on every squirt of the injector
- It's like having the best custom map writing, dyno operator tuning your fuel every time you crank the throttle
- Tunes every gear, every roll on, every environmental change, every engine mod, lugging the engine, winding it out to redline: it reacts, verifies, and adjusts when the bike is accelerating
- Provides perfect acceleration fuel settings in any condition, with any exhaust system with any engine modifications
- No matter what kind of new hardware you install on your bike--a new exhaust system, a freer-flowing air filter setup or even a big-bore hop-up kit with high-performance cams, PowrPro continues to analyze and tune your engine for peak performance
- No external adjustments needed
- No dyno needed
- No additional components needed
- Does not require wide band oxygen sensors

NOTE: Not legal for operation on public highways in the state of California.

PART #	DESCRIPTION	SUG. RETAIL	PART #	DESCRIPTION	SUG. RETAIL
1020-1553	For 12 FXS/FLST	\$599.95	1020-1551	For 12 Dyna Glide	\$599.95

**Fi2000**

## FI2000R O<sub>2</sub> FUEL PROCESSOR

- The Fi2000R O<sub>2</sub> digital fuel processor is designed to work with all H-D exhaust systems (stock or aftermarket) equipped with oxygen sensors in place (closed-loop design)
- Works much like a carburetor jet kit with adjustments similar to the air-mixture screw, the needle and clip positions and the main jet
- The Fi2000R increases horsepower and torque by optimizing stock lean air/fuel mixtures (helps cool the engine temps as well)
- Quick and simple installation with plug-and-ride technology with OEM-style connectors
- No confusing computer downloads to install
- No expensive dyno-testing required
- Pre-configured from the factory for your make and model, but easy to adjust should your specific application need it
- Improves overall rideability

NOTE: Standard models not legal for operation on public highways in the state of California.

NOTE: C.A.R.B. E.O. # D-633-1.

**Low-Speed Screw**  
This control functions similar to the air mixture screw on a carburetor, controlling off-idle fuel demands and steady cruising.

**Mid-Speed Screw**  
This is the equivalent of the needle and clip position on a carburetor. Two increments correspond to dropping the clip on a needle one position. One increment is the same as adding a shim. This is where you get the proper fuel mixture under load and acceleration.

**High-Speed Screw**  
This is the electronic counterpart to your main jet. Each numbered increment is the same as going up one main jet size starting with the stock size at zero. This adjusts your fuel at full throttle.

## LYNDALL RACING BRAKES

Paul Kittrell who founded Lyndall Racing Brakes back in 1998 used his background in race car brakes to develop some of the best brake pads available for H-D models. These days the folks at LRB are expanding their stopping power into rotors like the Millenium 20 Spoke and Lug Drive styles that you see here. Combined with their brake pads riders will realize great feel and unmatched braking in all conditions.

## LUG-DRIVE BRAKE ROTORS

- Friction ring is CNC-machined from satin-finish high carbon steel or from a lightweight aluminum-ceramic composite material
- Each rotor has a friction ring machined to fit flush with a carrier crafted from 6061 T-6 billet aluminum, locked together with a spiral retaining clip, giving the clean uninterrupted look of a solid rotor with the ultimate braking experience you can expect from a high performance fully-floating rotor by Lyndall Racing Brakes
- Available with chrome-plated or black anodized carrier
- For best results, use Lyndall Racing brake pads; see the Drag Specialties FatBook for applications
- Sold each
- Made in the U.S.A.

### INFORMER LED FUEL/BATTERY GAUGE

- Cap incorporates LED battery and LED fuel gauge
- Daylight sensor adjusts LED brightness level
- Fuel gauge illuminates a single green LED when full, from full to 5/8 tank a string of green LEDs, from 1/2 to 1/4 tank amber LEDs, from 1/4 red LEDs, and when near empty a flashing single red LED
- "Empty" fuel level at which the red LED begins flashing can be set by the rider
- Battery gauge shows green LEDs when the charging system is between 12.5V and 14.5V, amber LEDs if the bike is not charging and flashing red LEDs if charging level exceeds 15V or drops below 10V
- Gauge works in all models with fuel gauge mounted in the left fuel tank (except 08-12 FXST/FLST and FLHR)
- The perfect match for Kuryakyn's flush-mount gas cap

PART #	DESCRIPTION	SUG. RETAIL
2212-0368	Informer LED battery/fuel gauge	<b>\$129.95</b>

### SPEEDOMETER AND TACHOMETER GAUGE BROW

- Thin contour gauge brow adds a sleek accent but doesn't restrict being able to see the gauges at a glance
- Chrome-plated ABS construction
- Peel-and-stick installation
- Sold each
