- Delivers a continuous stream of air on both the up and the down strokes
- Simply turn the release valve counter-clockwise and you're pumping air only on the down-stroke; a great option when inflatable is almost full and there is back pressure
- Four universal valves are included to fit Boston valves and stem valves
- Accordion-style hose stretches to five ft. long and interlocks to the pump so it doesn't fall off while you're pumping
- Volume is two liters/stroke
- Very effective for "topping off" large towables in the boat, since peak pressure is an impressive 14 psi

- Blade geometry designed specifically for high compression ratio jet-pump systems
- Improve acceleration and top end while eliminating performance holes
- Lower pitch angle is recommended for stock motors; higher pitch angle is recommended for modified motors; lower pitch angle can also be used with modified motors if improved acceleration is desired

TWIN: STATE-OF-THE-ART DESIGN

- Specially for select Sea-Doo RXP, RXT and GTX models and Yamaha SHO, SHO FRZ and FZS models, the twin series features the latest advances in high-performance impeller design

SUPER CAMBER

- Grunt and speed from one impeller
- The blade has a variable pitch, designed to give both strong low-end thrust and unmatched top-end performance
- Race, tow waterskiers and carry multiple passengers with ease
- A- and B-series offer a cost-effective solution and features both low-speed torque and all-out high speed in one impeller
- I-, J-, K- and S-series feature a proven impeller design with increased blade surface and smaller hub for more power and volumetric flow, making them the best all-around impellers on the market

SUPER CAMBER NOTATION: In the application chart, Super Camber impellers are listed in the format "Super Camber (x/y/z)." This denotes the Solas series for the Stock, Limited and Modified impellers respectively. "Super Camber (I/J/K)," for example, means that the Stock impeller listed is "I" series, the Limited is "J" series, and the Modified is "K" series.

NOTE: Choose impeller based on level of engine modification: Stock, Limited or Modified. See appropriate columns in chart.

NOTE: Lower pitch impellers recommended for high altitude, pulling or freestyle applications.

THE DESTROYER

- When it comes to performance, this impeller is state-of-the-art
- Unique 3-D blade design was developed using the latest hydrodynamics research
- Blades have a super-progressive pitch and minimal overlap for hard acceleration throughout the powerband and increased top-end speed
- 3-D design reduces cavitation in all water conditions
- Precision-cast using aerospace-grade stainless steel, then heat-treated, CNC-machined and dynamically balanced
- Application chart is based on level of engine modifications; stock, limited (some bolt-on parts added) or modified (extensive engine/head work)
- If more than one PART # is listed in a column, the first is the recommended application, and the second is for those seeking maximum performance gains

AQUAVEIN INTAKE GRATES

- Maximize water flow and pump efficiency
- No more slow acceleration, bouncing, sliding, rough turning or mediocre top-end
- Patented dual-wing technology feeds water into the pump's entryway so air won't get trapped in the pump and cause cavitation
- Deep side rails help channel water and force-feed the wing area while turning
- Great for managing rough water conditions
- Stability, handling, cornering and acceleration are all dramatically improved

TUBBIE DESTROYER SPONSONS

- Constructed specifically with the aggressive racer and freerider in mind
- Built and shaped specific to the unique hull shape of the SuperJet, FX1, Kawasaki SXR and Hydrospace, the Tubbie Destroyer is fully removable with an average 10 minute per side install
- For racers shredding the stock class, the Tubbie Destroyers for the SuperJet allow the hull to sit slightly deeper in the water, while still giving the ski the well known benefits of the Tubbies aggressive turning, hook up and bow buoyancy, all without creating too much floatation and side to side instability at mid speeds
- Each set available in white or black gel coat and includes detailed installation instructions and all stainless and billet aluminum hardware

2.5 DEGREE NOZZLE WEDGE KIT

FOR SEA-DOO 951

- Designed, developed and tested extensively in all types of flat and rough water conditions to ensure that there would be no compromises anywhere in the handling performance
- Most brands of watercraft have some form of V.T.S. (variable trim system) including other model Sea-Doos; why the 951 and RXT don't have a trim system is a mystery – it's about the only feature that this model is missing
- Extensive testing has led our development team to wedge the reduction nozzle up 2.5 degrees which will inexpensively give your machine better handling everywhere and provide a boost of 1 to 2 mph in top-speed performance)
- The billet aluminum CNC machined 2.5 degree reduction nozzle wedge kit was designed to work with the OEM O.P.A.S. system and installs easily in 15 to 20 minutes with R&D's "easy install" directions

BLOWSION

ENGINE KEEPERS

FOR YAMAHA SUPER JET (ALL)

- Designed in conjunction with (and required by) Blowsion SXR Pro Freerider Air Darin Anderson and SL rider Joe Kenney; these "Kenney Keepers" are a must have for any hardcore surf or flat-water invert artist riding a Yamaha Super Jet
- Each set contains a left and right side front mount retainer and extended stainless hardware for installation
- Unique close tolerance design retains the front "top heavy" weight of the engine block from being flexed or thrown forward during flat out maneuvers or inverts
- Since this is a common occurrence even in flat water racing action, Blowsion designers also found them to be excellent insurance against ever having to replace those expensive engine mounts again
- Anodized blue; kit includes left and right contoured brackets and stainless mounting bolts

FLO Oil Filters

FLO STAINLESS STEEL, REUSABLE "SPIN-ON" OIL FILTERS

- Made from laser-cut, medical-grade, 304 stainless steel micronic filter cloth, this filter provides 200% more filter area in many cases
- Stainless filter catches items down to 35 microns, which is about three times better than most good paper or brass filters
- Unlike glued paper filters, the FLO Oil Filter pleat seam is welded and able to withstand up to 600 degrees
- Filters maintain consistent flow under all conditions including extreme heat, the presence of water, and cold start-ups where paper filters can flow so poorly that they often cause the bypass valve to open and allow unfiltered oil to enter your engine
- Should be the last filter an owner ever needs; this high tech filter technology is widely used in all types of auto racing including NASCAR, Indy type cars, Formula 1 and in the Aerospace industry where filtration is of the utmost importance

POWERSHOT ADJUSTABLE FUEL TUNERS

FOR SEA-DOO

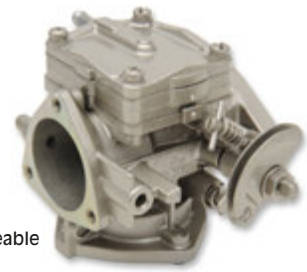

- Deliver increased horsepower, acceleration, and stronger mid-range performance by delivering a higher performing air-to-fuel ratio (A.F.R.) to the engine
- Many of today's high-performance fuel-injected 4-stroke muscle craft have a lean A.F.R.
- R&D Performance has tested, documented and analyzed the OEM fuel maps on every current fuel-injected 4-stroke watercraft, and pre-programmed and coded the new R&D Powershot fuel-injection control module to safely alter the OEM fuel map to a higher performing and safer A.F.R. (richer)
- More horsepower, greater acceleration and stronger mid-range are the result when the proper A.F.R. is achieved and is tuned for optimum performance
- The R&D Powershot is fully adjustable on the fly (with the engine running, observed and tuned while riding), and will accommodate a wide range of adjustability to properly performance-tune the A.F.R. for any combination of aftermarket parts
- The R&D Powershot will add horsepower, reliability and adjustability to any electronic fuel-injected 2- or 4-stroke watercraft engine

FUEL PUMP PRESSURE REGULATOR BLOCKOFF FITTING KIT

- Blockoff fitting kits will allow the OEM in-tank fuel pressure regulator to be removed completely and replaced with a billet part which is necessary when installing an aftermarket externally adjustable fuel pressure regulator
- The OEM in-tank fuel pressure regulator is fixed to maintain 40-43 pounds of fuel pressure at all times; for high performance applications where horsepower is boosted, it is necessary to install larger-flowing fuel injectors and be able to tune the fuel pressure up or down as needed
- Most factory race teams are running 65 plus pounds of fuel pressure along with higher-flowing fuel injectors and externally adjustable pressure regulators – the R&D Fuel Pressure Blockoff Fitting is the answer to quickly replace and block off the port
- The R&D fitting is manufactured to "Deadhead" or block the port solid

FOOTWELLS - KICKERS

FOR KAWASAKI SX-R 800 AND YAMAHA SUPERJET

- Designed specifically for the Super Jet and Kawasaki SX-R 800; and used exclusively by Ross Champion on his Factory Blowsion Yamaha SuperJets and Air Darin Anderson on his SXRs and SJs
- Hand-laid, molded fiberglass insets provide extended room in the tray of the ski to position feet
- Comfortably sized for average to larger feet (size 7- 11+), these footwells contour to the ankle and also feature a gentle protrusion over the top of the foot for better locking power
- Built with safety and performance in mind, the Kicker footwells will help keep riders in their ski while inverted, and also easily let them go when they feel like they're going to impact for some facial fiberglass

STARTERS

- Affordable starters are constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).

Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.

Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

MOTOMINDER HOUR METER

- Automatically records and displays your engine's accumulated run time, so oil changes, piston, rings, valves, spark plugs, etc. can be serviced at the correct maintenance schedule
- Correct schedule saves costly engine damage from service neglect, but Motominder can also save money from servicing too frequently
- Powered by the vehicle's electrical system by simply cable-tying its power line along the spark plug lead or direct connecting to the kill switch wire
- Smallest engine hour meter available (approximately 1 by 1.5 inches); doesn't require additional mounting brackets and can be easily mounted by the peel-and-stick method to the frame or other convenient area
- Records the installation date, and displays this briefly whenever the engine is started; on start-up it displays hours of runtime for 1 minute, flashes the runtime every 10 seconds while the engine is running and also displays runtime at power down for 2 minutes, so riders have plenty of time to get their helmets off before checking the display

BMS (BATTERY MANAGEMENT SYSTEM) 12V LITHIUM BATTERIES

2113-0708

- Smarter and lighter weight
- Lithium batteries provide better fuel economy, lasts four times longer, are two times lighter, 99% more efficient in charge and has a constant current versus AGM variable current
- All BMS batteries feature four terminals (two positive and two negative) that allow fitment on many powersports makes/models and also provides electrical accessory hook-ups options
- Flexible accessory blocks are also included to absorb vibration and to allow custom fitment on many different powersport models
- Includes BMS Smart battery management system that monitors, optimizes and protects the battery
- Battery management system is used to monitor battery SOC (State of Charge), optimize battery performance, protect battery from over-charge (over voltage protection), protect from over-discharge (low voltage shut-off)
- Battery Activation Wire connects Battery Activation Switch to BMS (Battery management system)
- When BMS detects possible over-charge or over-discharge (voltage below a certain threshold), the BMS will shut off the battery (cannot charge/discharge) to prevent permanent battery damage
- User can re-activate the lithium battery by pressing the Battery Activation Switch on the included Quick Disconnect Cable to allow battery to be charged again
- Quick Disconnect Cable has three terminals: one to positive, one to negative and one to Battery Activation Switch
- Fireproof coating engineered mechanism that supports high current flow during voltage discharging to provide thermal protection
- LiFePO4 Cell High performance UL1642 certified LFP cell
- IP67 bottom case engineered material with high melting point

NOTE: User is recommended to use Battery Tender Lithium Charger to recharge the lithium battery.

BATTERY TENDER® PLUS

- Constantly monitors the battery without the damaging effects of trickle chargers; a trickle charger will eventually boil dry or overcharge a battery
- Battery Tender Plus' voltage output compensates for temperature changes, providing additional protection
- Initial charge brings battery to full charge at approximately 14.6V
- After full charge is reached, converts to float charger and monitors battery at 13.2V
- Although a constant charge is being applied to the battery, there is little or no current (approx. 10mA)
- Periodic maintenance is recommended, but Battery Tender can monitor a battery for years without the fear of boiling or destroying the battery
- 12V Battery Tender Plus has fused quick-disconnect rings with a weather cover
- Optional Battery Tender storage pouch for safe and easy storage or transportation is available separately; see page 159 for PART #500-0017X

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 4,000°F
- Because the iridium electrodes of these plugs can be shrunk to only 0.4mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK cross-reference chart to order and stock these plugs

E3 RESISTOR SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

tecMATE

IGNITIONMATE

- Compact dual-display peak-voltage ignition tester that makes trouble-shooting all types of spark ignition systems easier, surer and quicker
- Ignition signals can damage even a good digital multimeter – IgnitionMate is specially designed to measure and dynamically display both primary and secondary ignition signals on bright LED bar graph displays
- The power sport industry's top tool for troubleshooting problems on all ignition systems (transistor, CDI, magneto, points)
- No disassembling of ignition components is required – this avoids accidentally introducing or correcting poor contacts in the system, which may further confuse and delay resolution of the unidentified problems
- Spark scale to measure the consistency of the high-voltage current signal and to determine misfires; the signal strength can be varied for display purposes; spark strength of different cylinders can be compared
- The dual displays allow simultaneous measurement of two different ignition signals; this allows you to narrow down between which two points the problem lies
- The instrument is powered by an internal rechargeable 1.5Ah NiMH battery that provides six hours autonomy; recharge the battery with any 12VDC source, such as a vehicle battery or 12VDC adapter
- The standard kit includes the instrument with rugged rubberized protective and mounting holster, combination spark cable caliper pickup with silicon lead, stick-coil adapter, silicon test lead set with insulated crocodile clips and Probulator backprobes, 12VDC two-meter (6½') power lead, instruction manual and quick reference guide all packed in a custom carry case
