New Polaris RZR Cab Heater Kit UTV ATV

New cab heater kit for the 2008-2013 Polaris RZR with Power Steering. Designed to fit up under the dash and does not eliminate the storage compartment under the hood.

Features:
3 Speed Hi Output Blower
290 CFM Fan Draws 4 Amps
Motor has 4,000 hour Brush Life and 3 year warranty
4 Fully Adjustable Louvers
Powder coated Steel Case (Not Plastic)

Open Hood and remove the storage compartment, this will allow easy access for the installation.

Remove lower radiator hose and drain cooling system, install hose back onto radiator, cut the lower hose where indicated and install the Y fitting making sure the heater hose connection is pointed in the correct direction, do the same on the upper radiator hose, again making sure the heater hose connection is pointed in the correct direction.

You will need to drill two 1 ” holes in the firewall with a holesaw to route the heater hose through. See attached pictures for location, they are both about 1 ½” from the factory hole in the firewall.

Attach the heater hoses to the previously installed Y fittings, either hose can be attached to either fitting. Tighten all clamps, refill radiator and check for leaks. Start the machine and recheck coolant level, the kit will require approximately 1 additional quart of coolant. You may want to drive it around for a while to allow the engine to warm up and circulate the coolant, it may take a few minutes before you get any heat out of the heater, this is due to the air in the cooling system. Once you start getting good heat recheck coolant level and check again for leaks.
