RAVEK

UNLIMITED LIFE TIME WARRANTY

# FAQs

### WHAT IS WIRELESS ABOUT THE KIT?

Like traditional Plug & Play turn signal kits, Speakeasy™ makes wired connections in the front and rear of the machine:

- Plug & Play wired connections in the front of the UTV (front turn signals, horn, hazards, access power).
- Plug & Play wired connections in the rear of the UTV (OEM taillight integration, OEM rear main harness connection).

Unlike traditional Plug & Play turn signal kits, Speakeasy™ comes with both a Front Control Module and a Rear Receiver:

- The Front Control Module delivers wired signals to the front of the UTV (turn signals, horn, hazards).
- The Rear Receiver delivers wired signals to the OEM taillight.
- The Speakeasy™ Front Control Module and Rear Receiver are permanently linked. Connection is automatic every time the UTV turns on.

### WILL MY FRONT AND REAR TURN SIGNALS BLINK IN PERFECT UNISON?

- Yes. The provided front blinker lights and your OEM taillights will blink in perfect unison every time.

### IS THE WIRELESS CONNECTION BLUETOOTH? DOES IT REQUIRE AN APP?

- There is no app or manual pairing required. The front-to-rear wireless connection activates automatically every time the UTV turns on.
- The wireless connection is not Bluetooth. It is a proprietary, FCC approved, wireless connection developed in-house by RAVEK.
- The wireless connection does not impact any OEM electronics or other UTV accessories.

### HOW DURABLE IS THE WIRELESS CONNECTION BETWEEN THE FRONT CONTROL MODULE AND REAR RECEIVER?

- The Front Control Module and Rear Receiver are permanently paired and tested at RAVEK's manufacturing facility in Wisconsin.

### WHAT HAPPENS IF I SOMEHOW BREAK THAT FRONT CONTROL MODULE OR REAR RECEIVER?

- With RAVEK's Unlimited Lifetime Warranty, you will receive a replacement part at no charge. No questions asked.
- There is a simple 5-minute factory reset process for both the Front Control Module and Rear Receiver.

### DOES THE KIT USE THE SAME WIRELESS CONNECTION FOR 2-DOOR AND 4-DOOR MODELS?

- Yes. The same wireless front-to-rear connection is used for 2-door and 4-door models. It has plenty of range.
