HELMET AIR PUMPER SYSTEM

Stay cool and eliminate dust with the Air Helmet Pumper System. Whether you're desert racing in Baja, cruising the dunes at Glamis, or hitting the short course track our Air Helmet Pumper System is a must-have for comfort and dust control.

Constructed using injection-molded ABS polymer, the housing is optimized for increased airflow. Combined with a specially built high static pressure fan, the air produces more pressure and more volume than any other helmet pumper available.

Utilizes a dual filtering system that increases performance and prevents premature clogging. The external pre-filter features uniform micro-openings that filter out most dust and debris before it can reach the internal filter. After race/ride day, simply clean both washable filters with water and you're ready for the next event. Easily mount using our half clamp bar mounts available in most tubing sizes

Take control of your air with our Rocker Switch Variable Speed Controller (VSC). This convenient rocker switch panel controller gives you quick and easy access to adjust the volume of airflow in your pumper without taking up valuable dash space

HELMET AIR PUMPER SYSTEM HOSE

- Super lightweight (1/2 lb) expandable pumper hose with a 1¼" inside diameter
- Capable of stretching between 2-6ft and manually collapses back to its original shape when not in use
- Enhanced flexibility allows multiple point adjustments between the blower system and helmet
- Durable cufflink ends stay tightly connected to the helmet and pumper system
- Designed for the Pumper series, but also compatible with Parker Pumper and other popular models
- The Pumper system and helmet are not includedt

HOW MIPS TECHNOLOGY WORKS

In a helmet with MIPS Brain Protection System (BPS) the shell and the liner are separated by a Low Friction Layer. When a helmet with MIPS BPS is subjected to an angled impact, the low friction layer allows the helmet to slide relative to the head. The MIPS BPS is designed to add protection in helmets against the rotational motion. The rotational motion is a combination of rotational energy (angular velocity) and rotational forces (from angular acceleration) that both affects the brain and increases the risk for minor and severe brain injuries. MIPS BPS has been scientifically proven to reduce rotational motion when implemented in a helmet by absorbing and redirecting rotational energies and forces transferred to the brain.

BRAIDED CLUTCH LINES

- Venhill Engineering in the UK makes Moose Racing® Stainless Steel Clutch lines to the highest specifications
- Each line is made from top quality PTFE coated hose, wrapped with British made stainless steel, and PVC coated for protection
- Rubber protection boots and extra rigid tubing are used to protect vulnerable areas from heat and impact and to prevent hose flex under compression
- Installing our stainless lines gives a large performance increase by significantly reducing expansion under pressure, and absorption of water when compared to stock rubber hoses

STAINLESS *STEEL BRAIDED BRAKE & CLUTCH LINES*

- Swivel union ends are the secret to easier fitting, and ensure a kink and stress free installation
- Venhill Engineering in the UK makes Moose Racing® Stainless Steel Brake Lines to the highest specifications
- Each line is made from top quality PTFE coated hose, wrapped with British made stainless steel, and PVC coated for protection and great looks
- Rubber protection boots and extra rigid tubing are used to protect vulnerable areas from heat and impact and to prevent hose flex under compression
- Each line is designed to withstand a minimum of 14,000 PSI
- Installing our stainless lines gives a large performance increase by significantly reducing expansion under pressure, and absorption of water when compared to stock rubber hoses

520 FB-RING CHAINS

- Top of the line, strongest, most durable sealed chain we offer
- Fine Blanking (FB), an incredibly precise manufacturing process that yields perfectly cut links
- Tight tolerances make the plate, pin, and bushing union accurate and strong
- Accuracy of the cuts and the use of stronger alloyed steel gives the FB the highest tensile strength rating of nearly 8,000 lbs
- Special sealing rings are chemically treated to gain strength and reduce friction
- The FB treatment allows the O-rings to be impregnated with grease
- FB rings are stronger and more durable than X-rings, with significantly less friction
- Gold links and rollers, silver inner plates, pins and bushings
- Clip-type connecting link included
- CC recommended / average tensile load 450cc & above / 7,937 lbs
- Replacement connecting M link available

CHROMOLY *STEEL FRONT DRIVE SPROCKETS*

- Machined from high tensile strength, impact and wear resistant chromoly steel to minimize deformation, corrosion and high temperature deterioration.
- Inner splines are broached to provide maximum spline-to-countershaft contact to distribute driveline forces over the largest possible surface area
- Heat-treated, then finished with a nickel plating for corrosion resistance and lubricity
- Each sprocket is quality checked by Computer Measurement Machine (CMM) to exactly match OEM design specifications

ALUMINUM *& STEEL REAR SPROCKETS*

- The 7075 T651 aluminum used for these sprockets receives an extra tempering, which reduces distortion and provides optimal thickness vs typically thinner 7075 T6 sprockets
- 100% machined, no stamping or grinding
- Optimal tooth thickness results in maximum tooth and chain contact
- Most Moose Racing® rear sprockets come anodized in black; some Moose Racing® rear sprockets are available in red, orange, or blue (indicated by footnote)

BRANDY RICHARDS

HIGH PERFORMANCE *4-STROKE PISTON KITS BY CP PISTONS*

- Moose Racing® pistons feature x-style forgings and fully boxed-style (race pistons) forgings for ultimate strength, minimizing friction, durability, power, and weight reduction
- The Pro Race Piston increases the durability by reducing the stresses in the pin bore area
- The Pro Race Piston allows the pin to flex while removing stress from the area
- Full radius dome designs maximize quench while eliminating hot spots that promote detonation
- Internal bracing maximizes durability while decreasing friction in the pin assembly
- Fully-boxed style (race pistons) forgings come standard with skirt coating which reduces friction, which in turn reduces heat. These are called out in the application chart
- Our race piston kits include a DLC pin. This technology has been proven and used because of its high resistance to abrasive wear, which extends the service life and reliability under extreme conditions
- Each Moose Racing® piston kit includes a high performance piston, wrist pin, rings and circlips
- Replacement parts available
- BE SURE TO USE RACE FUEL WITH SOME APPLICATIONS (CALLED OUT IN CHART)
- Made in the USA

- Designed to fit perfectly in the stock configuration.

Race Fit Kits:

- Feature a performance-focused bypass design, which replaces multiple individual hoses with one where possible reducing the overall number of individual hoses
- Reduces the number of potential failure points (like connections and seals) and often eliminates the thermostat, allowing the engine to run cooler and increasing reliability.

RADIATOR HOSE CLAMP KITS

- Designed by Samco® for exclusive use with hose kits and frame pieces
- Made from 304 W5 marine- grade 100% stainless steel and have a 13MM band
- Non-perforated bands prevent clips from biting into the hose
- Rounded band edges prevent the clip from cutting into the hose

RADIATOR CAPS

- Replacement cap is the least expensive and easiest way to solve or troubleshoot your liquid cooled bike/ATV radiator problems
- Upgrading to a high pressure 1.6 bar, 1.8 bar or 2.1 bar from the stock radiator cap is the simplest and least expensive way to avoid over-boiling your engine
- Raising your cooling system's maximum operating pressure increases your coolant's boiling point, allowing you to ride harder and longer
- Black finished cap
- Universal fit for most Japanese models
- High temperature corrosion resistant silicone seals

EXHAUST SPRINGS

- Stainless steel construction
- Swivel hook design eliminates binding, extending spring life
- Available for most late-model 2-stroke and 4-stroke models
- Sold in pairs
- Made in the USA

MEASURING FOR EXHAUST SPRING LENGTH

1. Exhaust springs should be measured when they are off the vehicle. Wear eye protection when removing
2. The length measurement should be taken from inside hook to opposite end inside of hook
3. For correct fit, an exhaust spring should not be extended more than 20% of its free length

If you need to know the length of the exhaust spring but don't have one to measure:
1. Locate the two mounting points for each spring.
2. Measure the distance between the two mounting points
3. To determine the proper length exhaust spring, add a minimum of 10% to the distance measured. For maximum tension add 20% of the distance, but no more than 20%. This will be the range of length needed for a proper spring tension fit.
4 Some exhaust systems use more than one length of spring. Be sure to measure the distance between all connecting points used for each exhaust system.

NOTE: PART NUMBERS GIVEN ABOVE ARE FOR UNMODIFIED AFTERMARKET EXHAUSTS. IF THE MUFFLER HAS BEEN MODIFIED FROM THE ORIGINAL LENGTH AND FALLS BETWEEN LENGTHS AVAILABLE ON THE CHART ORDER THE NEXT LONGEST CARTRIDGE AVAILABLE FOR YOUR MUFFLER.

*SPARK ARRESTOR REPACKS
WHEN CHOOSING A REPACK KIT FOR A SPARK ARRESTOR SILENCER, SUBTRACT 5.5" FROM THE LENGTH OF THE MUFFLER BODY FOR THE ACTUAL PACKABLE LENGTH AND ORDER BASED ON THAT LENGTH. EXAMPLE: A FMF TURBINE CORE 2 WITH A 14" LONG BODY WILL HAVE AN 8.5" PACKABLE LENGTH. ORDER THE NEXT LONGEST LENGTH . USE THIS RULE FOR PRO CIRCUIT ALSO.

**CUT TO LENGTH UNIVERSAL PILLOWS
PART NUMBERS PROVIDED ABOVE ARE DESIGNED TO PACK ALL MUFFLERS WITH CORE DIAMETERS BETWEEN 1.75" - 2.25" AND SHELL CIRCUMFERENCES BETWEEN 12" AND 13.5". MEASURE THE DISTANCE AROUND THE OUTSIDE OF THE MUFFLER'S SHELL TO DETERMINE ITS CIRCUMFERENCE.

***FMF Q STEALTH - MEASURE MUFFLER SHELL LENGTH ALONG THE BOTTOM OF THE SILENCER

OEM STYLE COLOR MATCHED FRONT & REAR WHEEL SPACERS

- Replace or upgrade OEM wheel spacers with these durable parts
- Water and dirt grind between wheel bearing seals and soft OEM aluminum wheel spacers, which creates grooves and allows for bearing contamination
- Moose Racing® wheel spacers feature hardened steel contact surfaces. This makes for a tight seal that will last for years and keep your bearings fresh
- Our spacers are made from either anodized aluminum with a press fit - hardened steel shell, or solid - hardened and ground bearing steel, depending on application
- Upgrade to Moose Racing® wheel spacers when you replace damaged wheel bearings, or before you have to
